

What is claimed is:

1. A box useful for pizza, the box comprising:
 - a first portion having a perimeter defined by opposing longitudinal side edges, a front edge and a back edge;
 - a second portion having a perimeter defined by opposing longitudinal side edges, a front edge and a back edge, the second portion being hingedly coupled to the first portion;
 - 5 a pair of side walls each hingedly coupled to one of the opposing longitudinal side edges of the first portion;
 - a front end wall hingedly coupled to a front edge of one 10 of the first portion and the second portion;
 - a back end wall hingedly coupled to a back edge of one of the first portion and the second portion; and
 - 15 a single transverse score line on the first portion and extending substantially between the opposing longitudinal side edges of the first portion.
2. The box of claim 1 being, in an unfolded state, a one piece blank.
3. The box of claim 1 wherein the transverse score line is offset from a centerline of the first portion.
4. The box of claim 1 wherein each of the side walls of the first portion includes a removable segment.
5. The box of claim 4 wherein each of the side walls of the first portion includes at least one side wall score line to facilitate removal of the removable segment.
6. The box of claim 4 wherein the removable segments are substantially triangular in at least one plane.

7. The box of claim 1 wherein the each of the side walls includes a substantially triangular segment having an edge coextensive along at least a portion of one of the opposing longitudinal side edges of the first portion.

8. The box of claim 1 wherein, when the second portion is separated from the first portion and the first portion is folded along the transverse score line, the first portion defines a container having a tapering depth.

9. The box of claim 1 which comprises recycled materials.

10. The box of claim 1 wherein the second portion includes second portion score lines to facilitate breaking the second portion into a plurality of segments.

11. The box of claim 10 wherein at least two of the second portion score lines cross each other.

12. The box of claim 10 wherein each of the plurality of segments is substantially equal in size.

13. A product formable into a space saving box, the product comprising:

a substantially flat portion having a perimeter defined by opposing longitudinal side edges, a front edge and a back edge;

a pair of side walls each coupled to one of the opposing longitudinal side edges of the portion;

a front end wall coupled to a front edge of the portion;

a back end wall coupled to a back edge of the portion;

10 and

at least one transverse score line on the portion and

extending substantially between the opposing longitudinal side edges of the portion;

15 wherein, when the portion is folded along the at least one transverse score line, the portion defines a box having a tapering depth.

14. The product of claim 13 wherein the at least one transverse score line is offset from a centerline of the portion.

15. The product of claim 13 wherein each of the side walls of the first portion includes a removable segment.

16. The product of claim 15 wherein each of the side walls of the first portion includes at least one side wall score line to facilitate removal of the removable segment.

17. The product of claim 15 wherein the removable segments are substantially triangular in at least one plane.

18. The product of claim 13 which comprises recycled materials.

19. The product of claim 13 wherein the substantially flat portion is a base of a box including a cover which is removed prior to the portion being folded along the at least one transverse score line.

20. A box useful for pizza comprising:
a base portion;
a cover portion coupled to the base portion and sized and structured to be placed on top of the base portion so as to
5 form a space between the base portion and the cover portion of sufficient size to hold a whole pizza; and

10 a score line on one of the base portion and the cover portion, the score line being positioned such that when the other one of the base portion and the cover portion is removed from the box, the portion with the score line is foldable about the score line into a smaller box having a varying depth.

21. The box of claim 20 wherein the score line is offset from a centerline of the portion on which the score line is placed.
